

20 SPACE FUN FACTS

1. **The Sun is a star** – It's the closest star to Earth and gives us light and heat!
2. **The Moon has no air** – That's why astronauts wear space suits.
3. **There are 8 planets in our solar system** – Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.
4. **Earth is the only planet we know with life** (and pizza!).
5. **The Moon is smaller than Earth** – You could fit about 50 moons inside Earth!
6. **Jupiter is the biggest planet** – It's so big, it could fit over 1,300 Earths inside!
7. **Saturn has rings** – They're made of ice and rock and look super cool.
8. **Mars is called the Red Planet** – Because it's covered in red dust.
9. **A day on Venus is longer than a year on Venus** – Venus spins very slowly on its axis, so it takes more time to complete one full spin (a day) than it does to go all the way around the Sun (a year)!
10. **There are more stars in space than grains of sand on Earth** – Mind-blowing, right?

Personal Use Rights

What you CAN do:

- You can print multiple copies of this set of printables for your personal use only.
- You can print out and share the physical copies for the purpose of community activities such as part of Church events, or any volunteer activities where you will not receive any monetary remuneration.
- If you are a professional educator, you are allowed to use this planner as a resource in your classroom.

What you CANNOT do:

- You CANNOT distribute the digital copy of this product. Please kindly refer your family and friends to our website freekidsprintables.org
- You CANNOT extract any part of this product, duplicate it, or copy the design to create other similar products to sell.
- This is NOT for commercial use.
- If you would like to create and sell your own printables as a side hustle, please check out my business website at faithsbizacademy.com

20 SPACE FUN FACTS

11. **The Moon has craters** – They're like big holes made by space rocks.

12. **You can't hear sound in space** – Because there's no air to carry it!

13. **Astronauts float in space** – Because there's no gravity to pull them down.

14. **The Sun is super hot** – About 10,000°F on the surface!

15. **Neptune is very cold** – It's far from the Sun and super windy.

16. **The Milky Way is our galaxy** – It's shaped like a big spiral.

17. **Some stars are bigger than the Sun** – Way, way bigger!

18. **The first person on the Moon was Neil Armstrong** – In 1969, he said, "That's one small step for man, one giant leap for mankind."

19. **There are thousands of satellites orbiting Earth** – Helping with phones, maps, and weather!

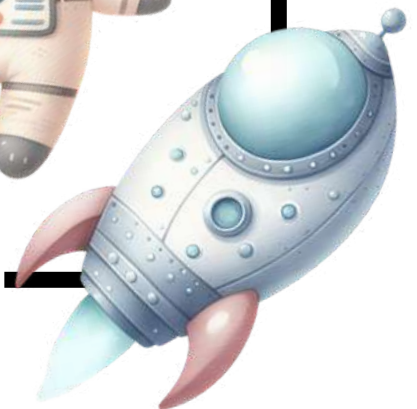

20. **You can see the Moon during the day sometimes** – Just look up and you might spot it!

NAME THE PLANETS IN OUR SOLAR SYSTEM

1. _____

5. _____

2. _____

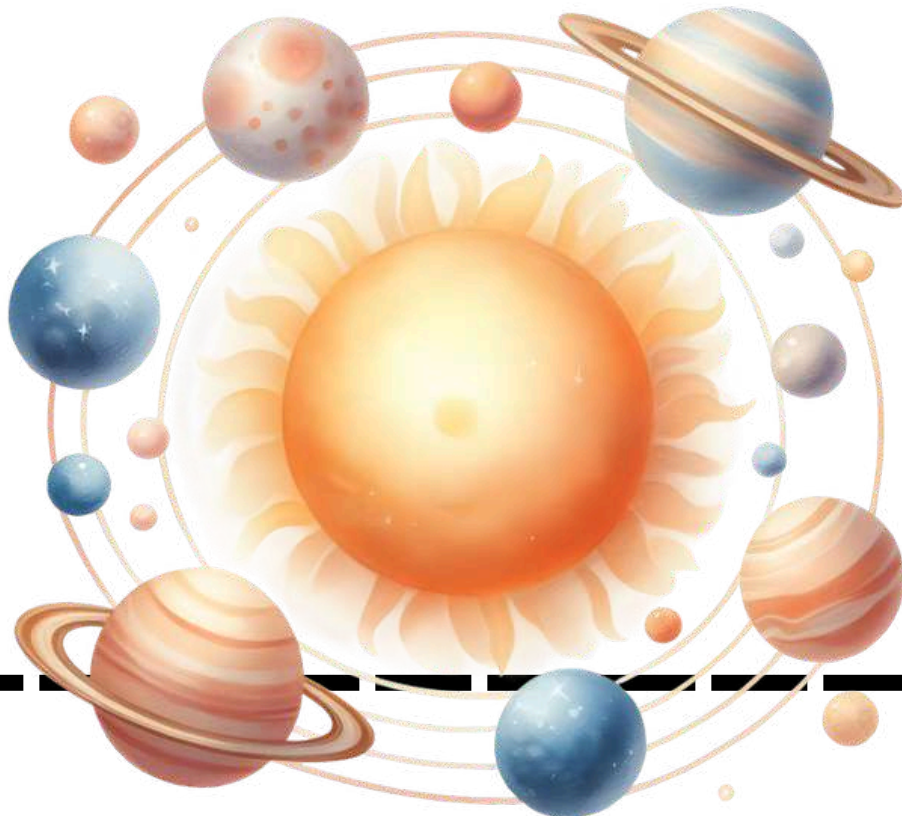

6. _____

3. _____

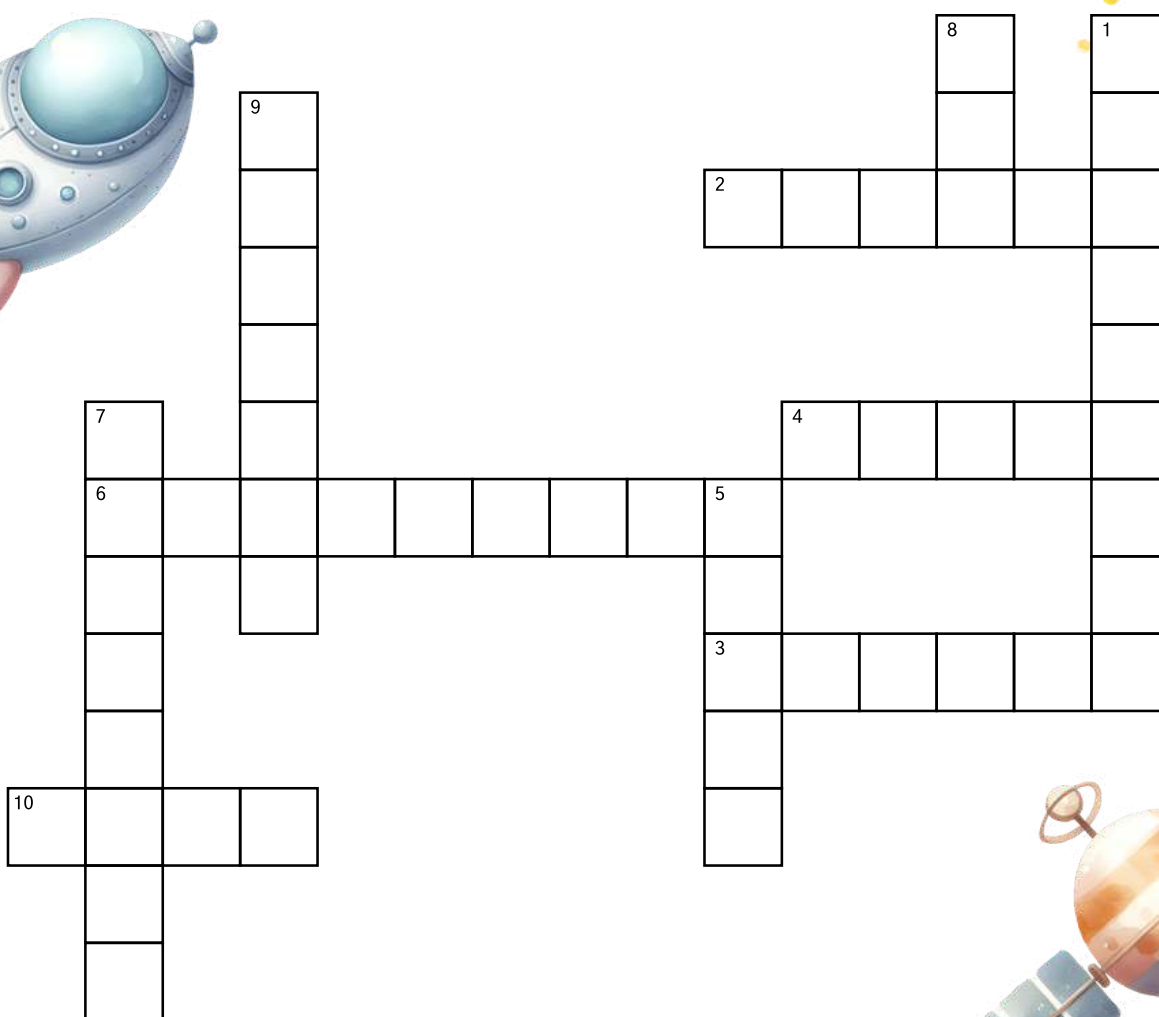

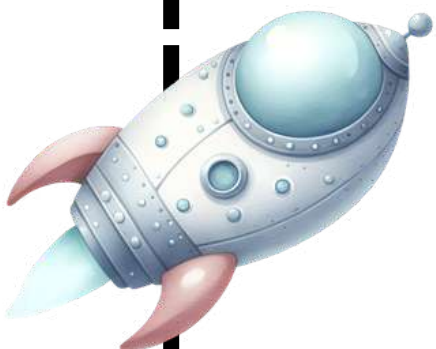

7. _____

4. _____

8. _____

SPACE CROSSWORD

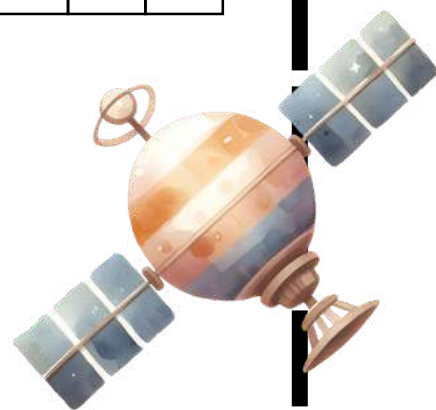

Across:

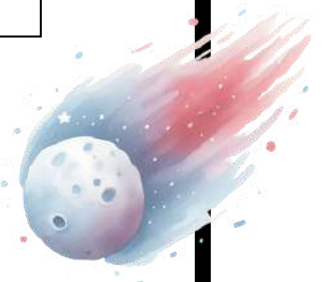

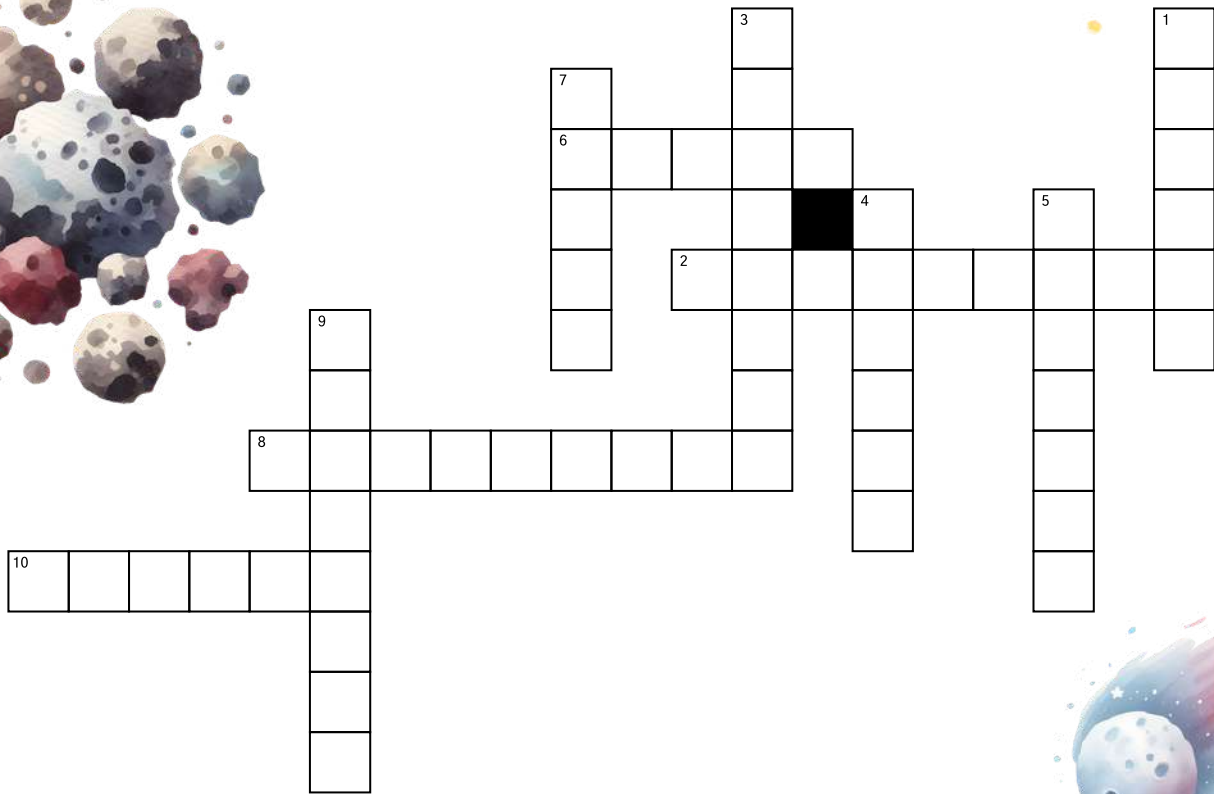

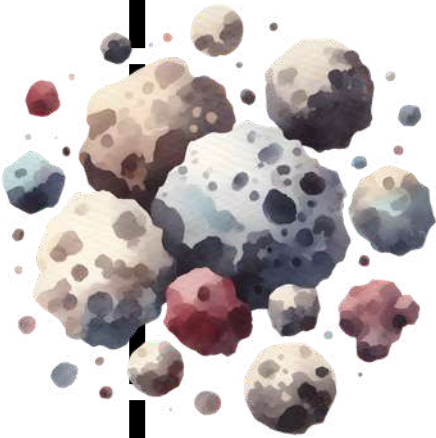

2. A big ball in space that goes around the Sun
3. A fast space vehicle that blasts off into the sky.
4. A make-believe creature from another planet.
6. Something that goes around a planet. It can be natural or man-made.
10. It shines at night and goes around the Earth.

Down:

1. A person who travels into space in a rocket.
5. The planet we call home.
7. A space rock that floats around the Sun.
8. A big star that keeps us warm and brightens our day.
9. The invisible force that keeps your feet on the ground.

SPACE CROSSWORD

Across:

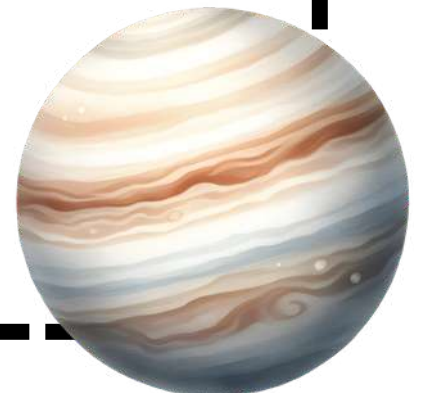

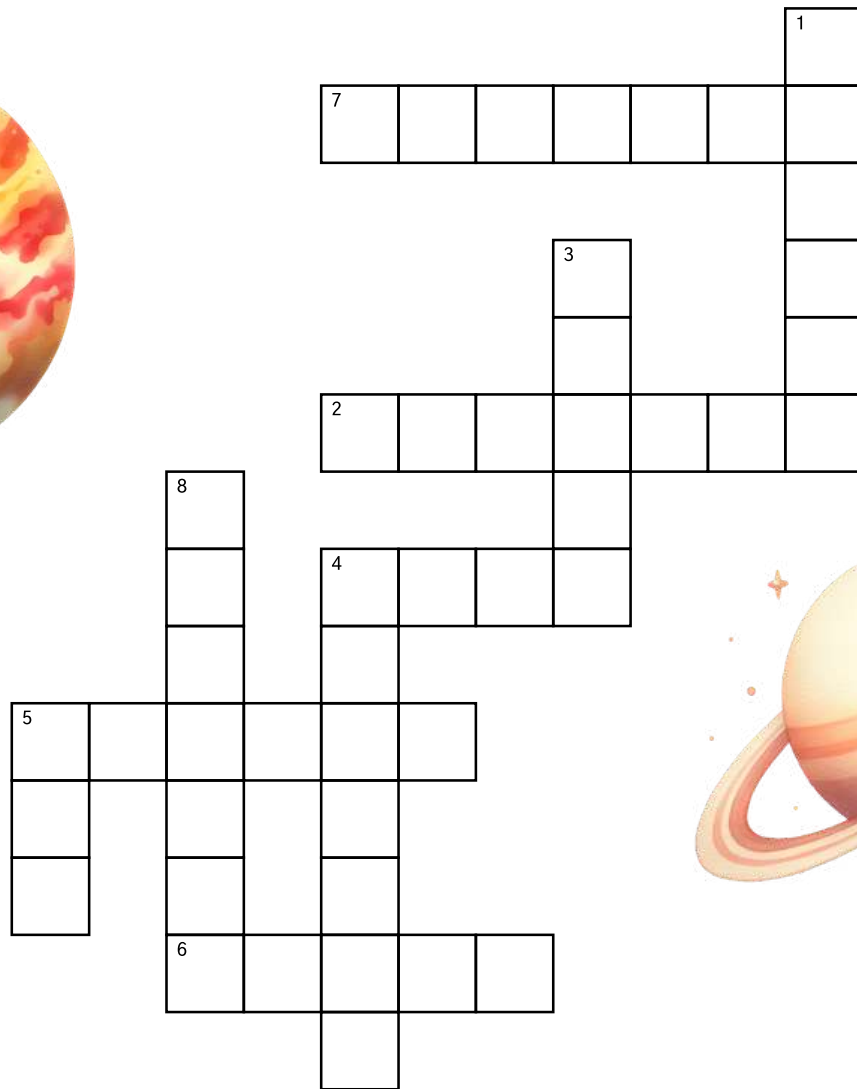

2. A tool you use to see faraway stars and planets.
6. The path a planet or moon takes as it goes around something.
8. A super strong space spot that pulls in everything—even light!
10. A huge space family made of stars, planets, and more. We live in one!

Down:

1. A big hole made when a space rock hits the Moon or a planet.
3. All of space and everything in it—planets, stars, and more!
4. An astronaut wears this on their head to stay safe in space.
5. A famous space robot that traveled far, far away from Earth!
7. A space snowball with a glowing tail that flies across the sky!
9. The name of our galaxy, filled with stars and planets.

PLANETS CROSSWORD

Across:

2. Big space balls that orbit the Sun.
4. The red planet with dust and maybe robots!
5. This planet has big, beautiful rings around it.
6. The planet we live on.
7. The biggest planet with a big red spot!

Down:

1. This planet spins on its side and looks bluish-green.
3. The hottest planet, sometimes called Earth's twin.
4. The closest planet to the Sun and also the smallest.
5. A giant star at the center of our solar system.
8. The farthest planet from the Sun and very windy.
